Blend N Bubbles

Sales Intelligence Report | Barrackpore Branch

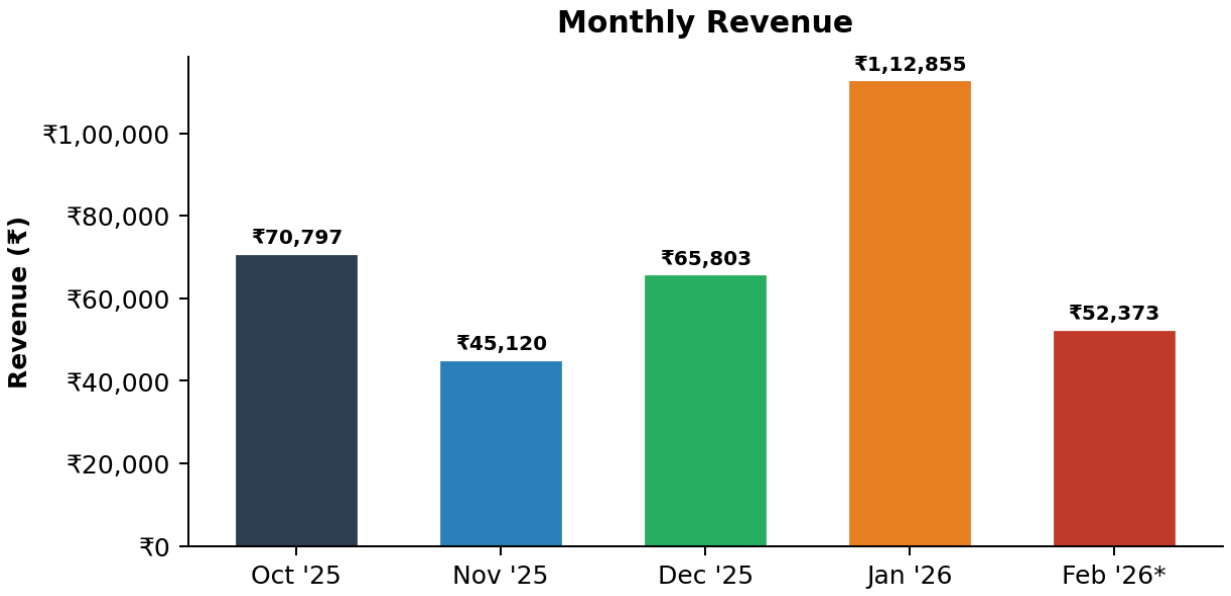
Period: October 2025 to February 2026 (partial) | Generated: 18 February 2026

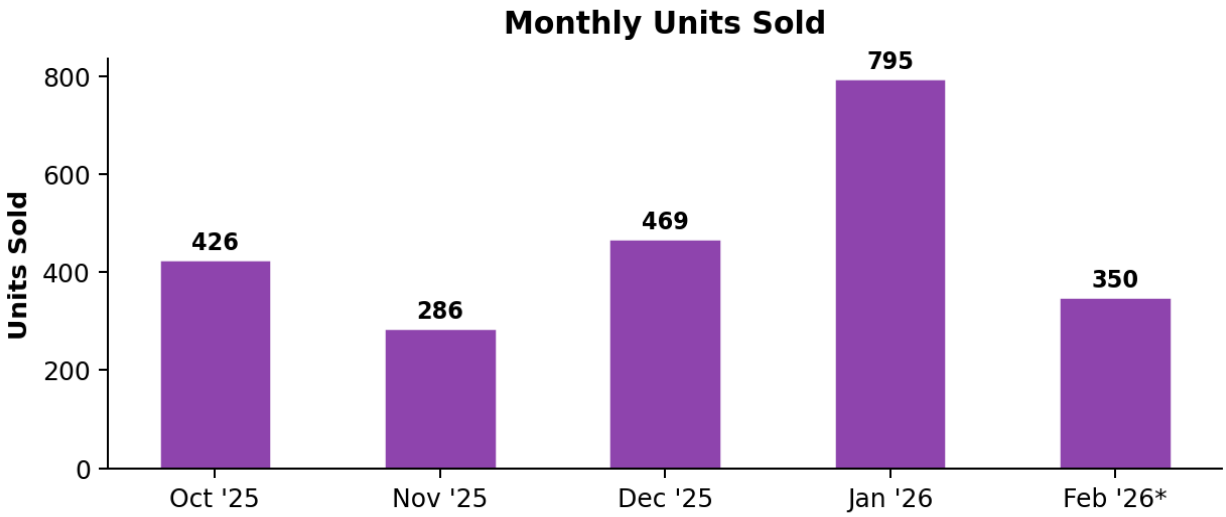
Executive Summary

₹3,46,950	2,326	₹149	84
Total Revenue	Units Sold	Avg. Unit Price	Unique Products

Over the five-month period from October 2025 to February 2026, Blend N Bubbles generated a combined revenue of ₹3,46,950 across 2,326 units sold. The product catalogue included 84 unique items spanning multiple categories. January 2026 was the strongest month with ₹1,12,855 in revenue, largely driven by winter-specific beverages. The linear regression model indicates a positive revenue trajectory of approximately ₹9,866 per month.

Monthly Performance

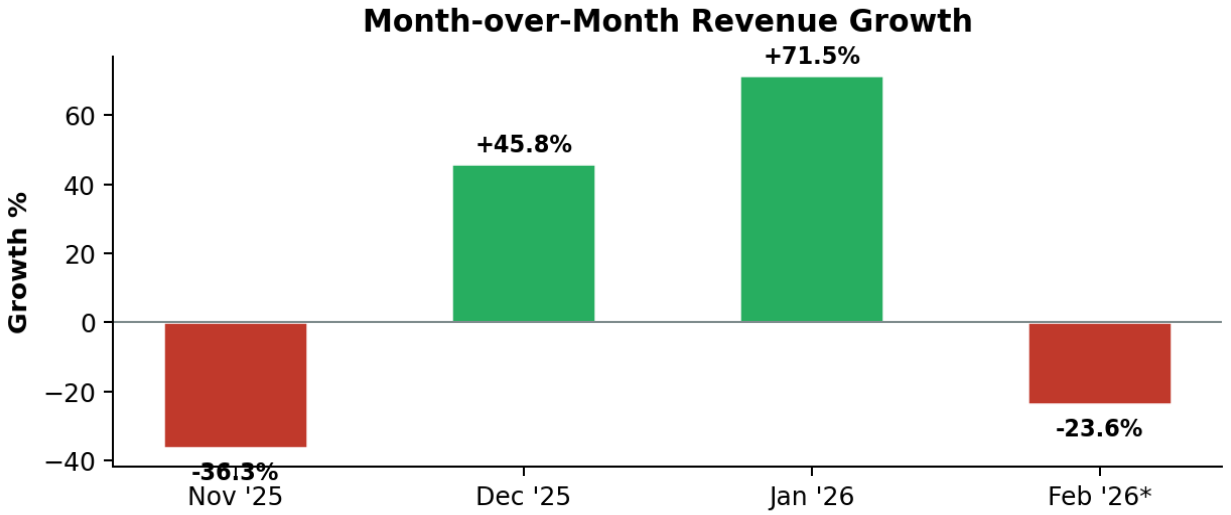




Month	Revenue	Units	Unique Items	Avg. Price
Oct '25	₹70,797	426	56	₹166
Nov '25	₹45,120	286	37	₹157
Dec '25	₹65,803	469	40	₹140
Jan '26	₹1,12,855	795	45	₹141
Feb '26	₹52,373	350	44	₹149

* February 2026 covers only Feb 1-17. Where noted, projections scale to a full 28-day month.

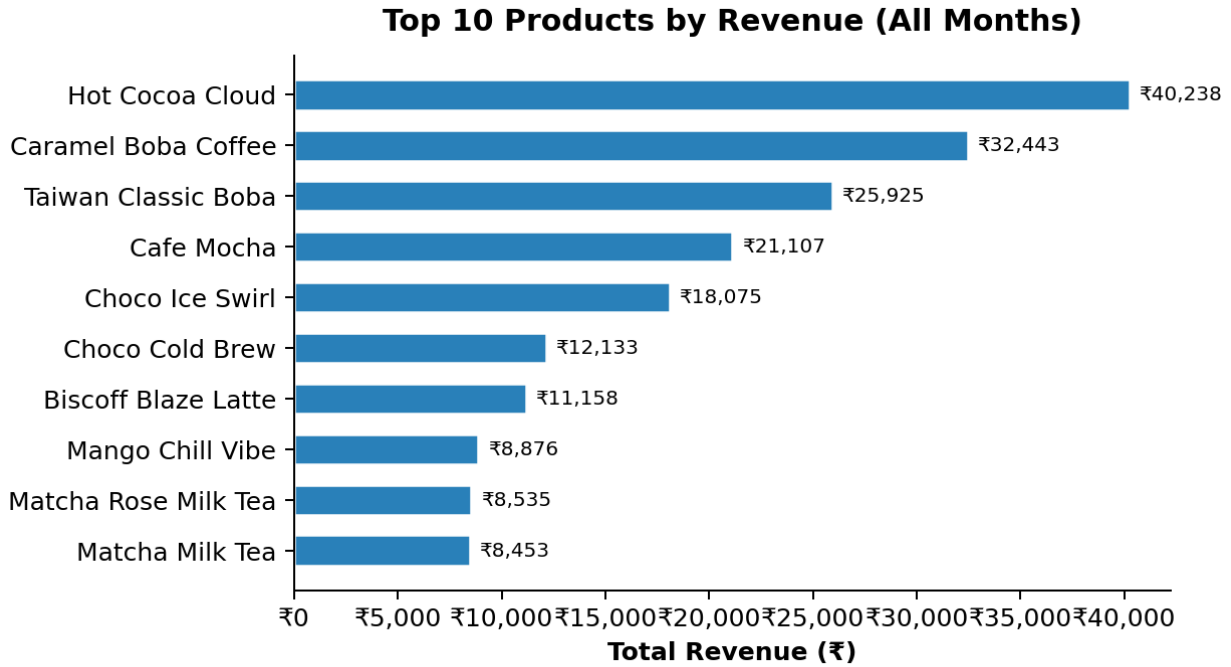
Month-over-Month Growth



November 2025 saw a revenue decline compared to October, coinciding with the end of the festive season and the transition into a quieter period. However, December recovered modestly, and January 2026 delivered a substantial surge — revenue grew to more than 2.5 times November's figure. This was driven by the popularity of winter-specific items in the BnB Signatures category, particularly Hot Cocoa Cloud, which alone generated ₹22,844 in January.

The average month-over-month growth rate across the period was 14.3%, indicating a positive overall revenue trajectory for the branch.

Top-Selling Products



#	Product	Total Qty	Total Revenue	Months Active
1	Hot Cocoa Cloud	236	₹40,238	3 of 5
2	Caramel Boba Coffee	201	₹32,443	5 of 5
3	Taiwan Classic Boba	141	₹25,925	5 of 5
4	Cafe Mocha	127	₹21,107	5 of 5
5	Choco Ice Swirl	104	₹18,075	5 of 5
6	Choco Cold Brew	74	₹12,133	1 of 5
7	Biscoff Blaze Latte	78	₹11,158	3 of 5
8	Mango Chill Vibe	58	₹8,876	5 of 5
9	Matcha Rose Milk Tea	46	₹8,535	5 of 5
10	Matcha Milk Tea	47	₹8,453	5 of 5
11	Blueberry Blend	51	₹8,432	5 of 5
12	Choco Lush Boba	39	₹6,761	1 of 5
13	Caramel Cafe Delight	54	₹6,701	3 of 5
14	Taiwan Signature Boba	45	₹6,667	5 of 5
15	Hawaii Bubble Soda	58	₹6,081	5 of 5

Hot Cocoa Cloud and Caramel Boba Coffee are the two highest-revenue products overall. Hot Cocoa Cloud generated ₹40,238 across December through February, establishing it as a clear seasonal winner during cooler months. Caramel Boba Coffee and Taiwan Classic Boba are consistent performers present in all five months, making them core menu staples. Choco Ice Swirl and Cafe Mocha round out the top five.

Monthly Best Sellers

Oct '25

#	Product	Qty	Revenue
1	Choco Cold Brew	74	₹12,133
2	Choco Lush Boba	39	₹6,761
3	Matcha Milk Mix	35	₹6,023
4	Taiwan Signature Boba	25	₹4,319
5	Strawberry Snow	20	₹3,466

Nov '25

#	Product	Qty	Revenue
1	Cafe Mocha	37	₹6,117
2	Taiwan Classic Boba	37	₹6,952
3	Matcha Milk Tea	20	₹3,450
4	Caramel Boba Coffee	18	₹2,828
5	Choco Ice Swirl	17	₹2,914

Dec '25

#	Product	Qty	Revenue
1	Hot Cocoa Cloud	78	₹13,302
2	Caramel Boba Coffee	43	₹7,020
3	Biscoff Blaze Latte	31	₹4,427
4	Assam Garden Brew	27	₹2,288
5	Taiwan Classic Boba	27	₹4,841

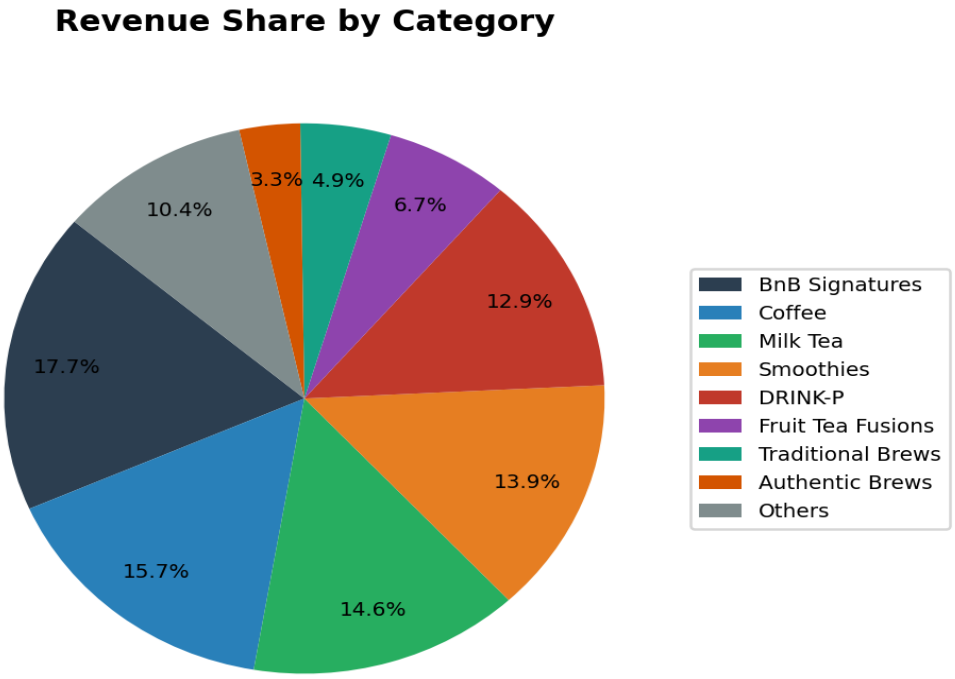
Jan '26

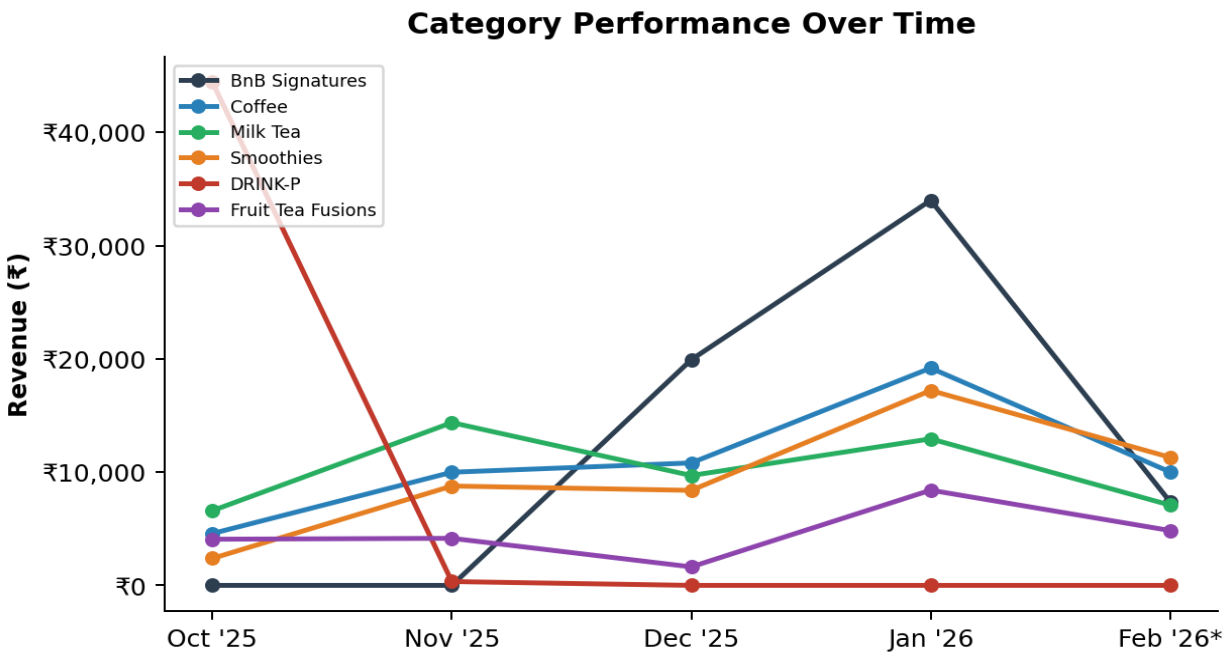
#	Product	Qty	Revenue
1	Hot Cocoa Cloud	134	₹22,844
2	Caramel Boba Coffee	79	₹12,788
3	Classic Boba Brew	61	₹4,036
4	Choco Ice Swirl	44	₹7,731
5	Cafe Mocha	38	₹6,403

Feb '26

#	Product	Qty	Revenue
1	Caramel Boba Coffee	41	₹6,567
2	Taiwan Classic Boba	25	₹4,266
3	Hot Cocoa Cloud	24	₹4,091
4	Choco Ice Swirl	22	₹3,771
5	Cafe Mocha	20	₹3,449

Category Analysis

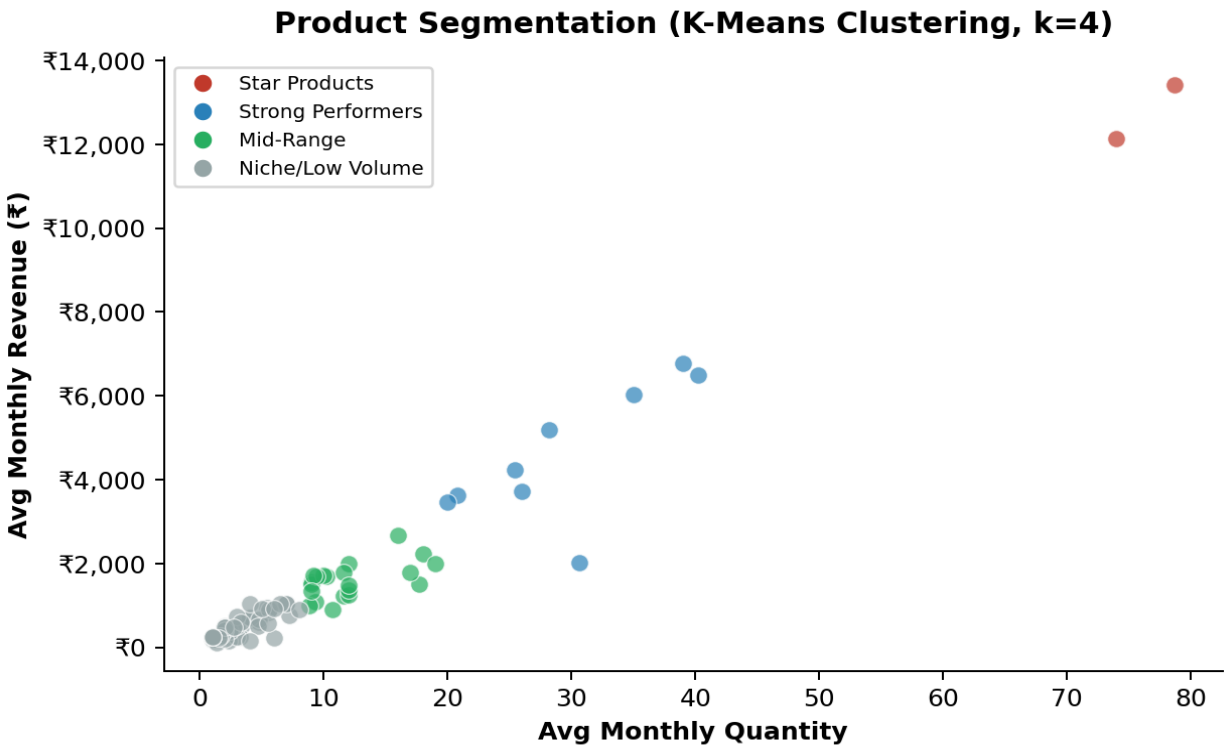




The top three revenue-generating categories are BnB Signatures (₹61,318), Coffee (₹54,599), and Milk Tea (₹50,711). Together, these account for approximately 48% of total revenue. The BnB Signatures category shows the most dramatic month-to-month variation, peaking sharply in January 2026 due to Hot Cocoa Cloud sales. The DRINK-P category generated ₹44,428 in October alone, making it the largest category that month. It included items such as Choco Cold Brew, Matcha Milk Mix, and various sodas. By November it had dropped to just ₹338, as its products appear to have been recategorised into their respective standard categories (Soda, Smoothies, Authentic Brews, etc.) from November onward rather than being discontinued.

Product Segmentation (K-Means Clustering)

A K-Means clustering algorithm (k=4) was applied to segment the product catalogue based on two features: average monthly quantity sold and average monthly revenue. The algorithm iteratively groups products with similar sales profiles, revealing four distinct tiers of performance.

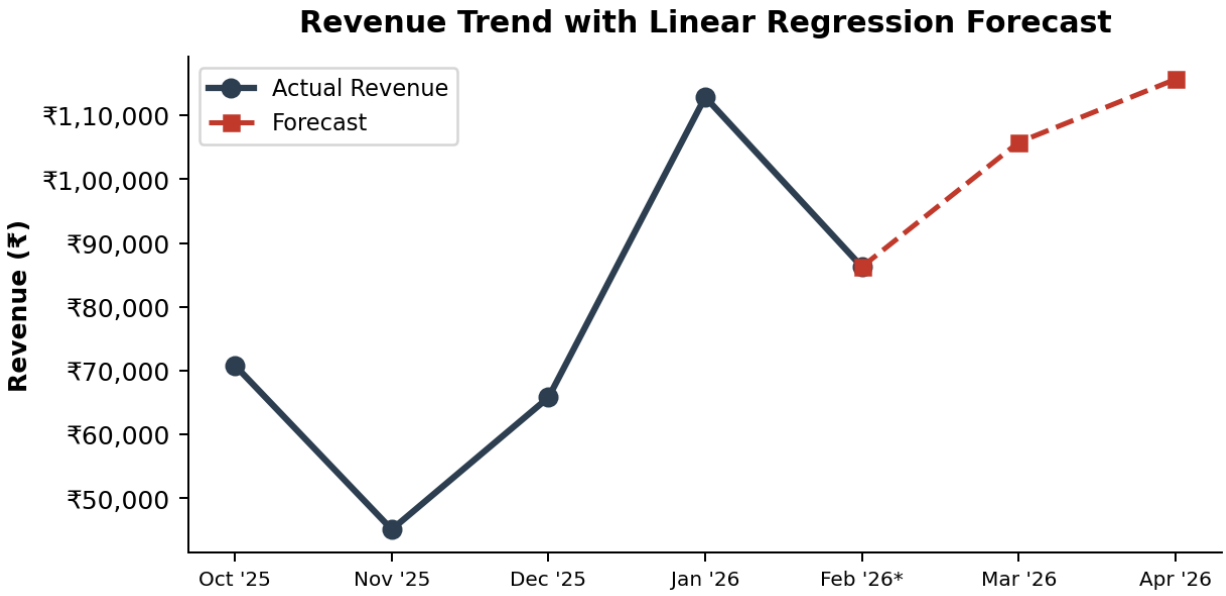


Segment	Count	Combined Revenue	Example Items
Strong Performers	9	₹1,31,037	Biscoff Blaze Latte, Cafe Mocha, Caramel Boba Coffee
Mid-Range	21	₹93,754	Assam Garden Brew, Black Currant Smoothie, Blueberry Blend
Niche/Low Volume	52	₹69,787	Assam Boba Tea, Black Currant Smoothie-pp, Black Current Cheese
Star Products	2	₹52,371	Choco Cold Brew, Hot Cocoa Cloud

Star Products are the small set of items that drive outsized revenue and volume. These require consistent supply chain attention and should be prominently featured in marketing. Strong Performers represent growth potential — with targeted promotions or combo deals, some of these could be elevated to star status. The Niche/Low Volume segment contains over half the catalogue; pruning underperformers from this group could simplify operations and reduce waste without materially impacting revenue.

Revenue Forecasting (Linear Regression)

A linear regression model was fitted to the five months of historical revenue data to project the revenue trajectory for the near term. February's partial data (17 days) was extrapolated to a full 28-day month before fitting.



The model estimates a monthly revenue increase of approximately ₹9,866. Based on this trend, projected revenue for March 2026 is ₹1,05,766 and April 2026 is ₹1,15,633. The R-squared value of 0.382 indicates moderate fit — this is expected given only five data points and the influence of seasonal factors. As more months of data accumulate, the model's reliability will improve.

It is worth noting that revenue is not purely linear. Seasonal patterns (winter beverage demand, festive seasons, Valentine's Day) create peaks and troughs that a simple linear model cannot fully capture. A seasonal decomposition or ARIMA model would be more appropriate once 12+ months of historical data become available.

Recommendations

Protect core products

Caramel Boba Coffee, Taiwan Classic Boba, Cafe Mocha, and Choco Ice Swirl are present in all five months and rank among the top revenue generators. Hot Cocoa Cloud is a dominant seasonal seller (December through February). Ensure reliable supply for these items and consider loyalty or bundling incentives to maintain customer attachment.

Expand seasonal and limited-edition offerings

The Valentine's Day specials (Hongkong Rose Milk Tea, Lychee Rose Smoothie) generated ₹4,667 in just 17 days. Similarly, Halloween items in November contributed ₹2,176. These results validate the strategy of introducing time-limited menu items around holidays and events.

Rationalise the menu

With 84 unique products and over half falling into the Niche/Low Volume cluster, there is room to streamline. Removing or consolidating the lowest-performing items would reduce ingredient complexity, minimise waste, and sharpen the menu's identity.

Invest in winter beverage marketing

The December–January period accounts for a disproportionate share of annual revenue. Plan marketing campaigns and inventory builds around this window, especially for hot beverages in the Signatures and Traditional Brews categories.

Monitor pricing and margins

Some high-volume items (e.g., Classic Boba Brew, Assam Garden Brew) have relatively low unit prices. A margin analysis would help determine whether these items are contributing appropriately to profitability or if a modest price adjustment is warranted.

Methodology

This report was generated by parsing five monthly Item Wise Sales Report files (Excel format) covering October 2025 through February 2026. All item-level rows were extracted, normalised, and aggregated using Python (pandas, numpy). Two machine learning techniques were applied: K-Means clustering (k=4, Euclidean distance, 50 iterations) for product segmentation, and ordinary least squares linear regression for revenue trend estimation and short-term forecasting. Charts were produced with matplotlib. February 2026 data covers the 1st through the 17th only; where noted, values are scaled proportionally to a full calendar month.
