Blend N Bubbles

Sales Intelligence Report | Barrackpore Branch

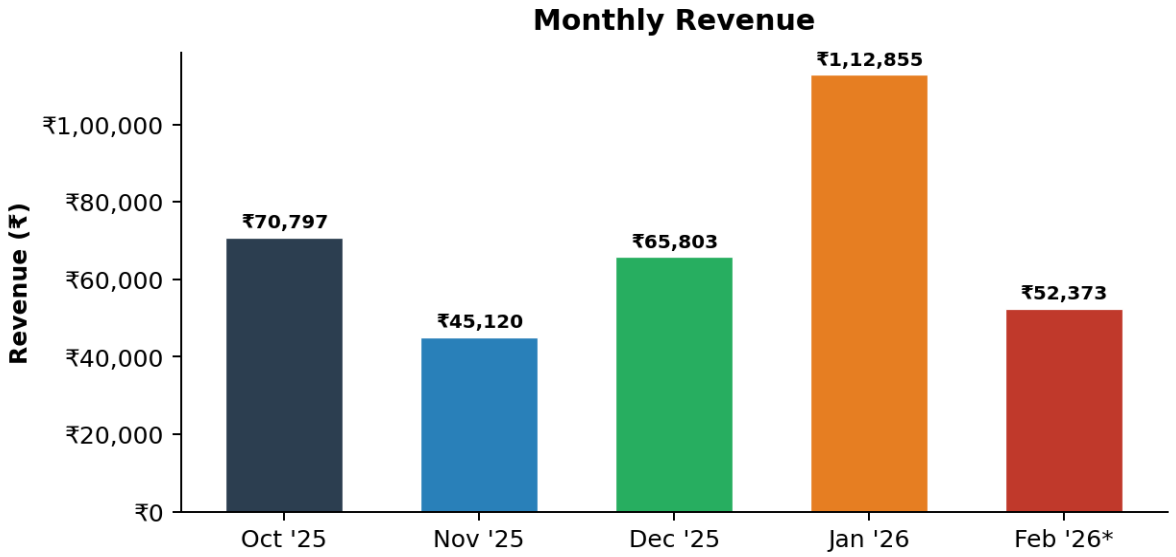
Period: October 2025 to February 2026 (partial) | Generated: 18 February 2026

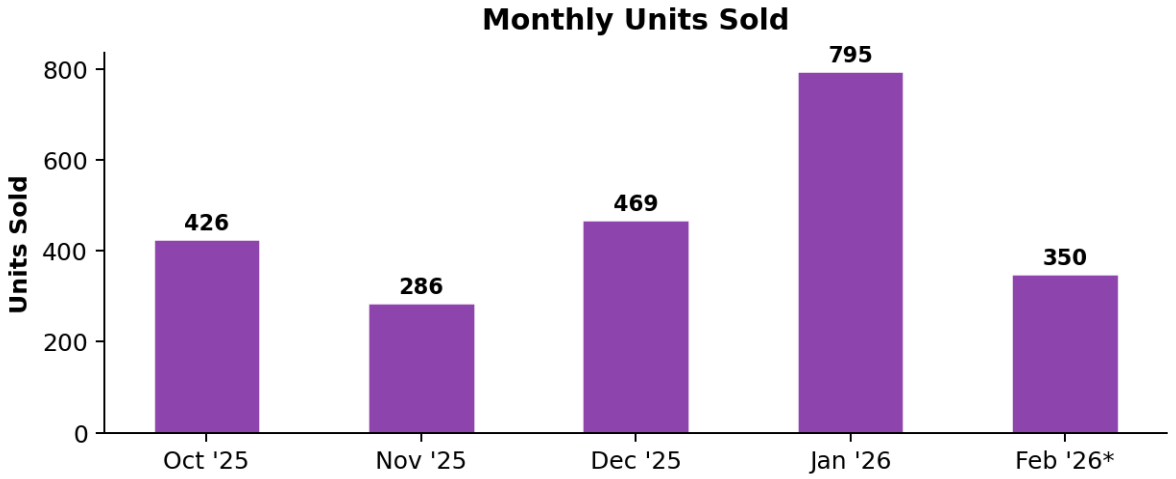
Executive Summary

₹3,46,950	2,326	₹149	84
Total Revenue	Units Sold	Avg. Unit Price	Unique Products

Over the five-month period from October 2025 to February 2026, Blend N Bubbles generated a combined revenue of ₹3,46,950 across 2,326 units sold. The product catalogue included 84 unique items spanning multiple categories. January 2026 was the strongest month with ₹1,12,855 in revenue, largely driven by winter-specific beverages. The linear regression model indicates a positive revenue trajectory of approximately ₹9,866 per month.

Monthly Performance

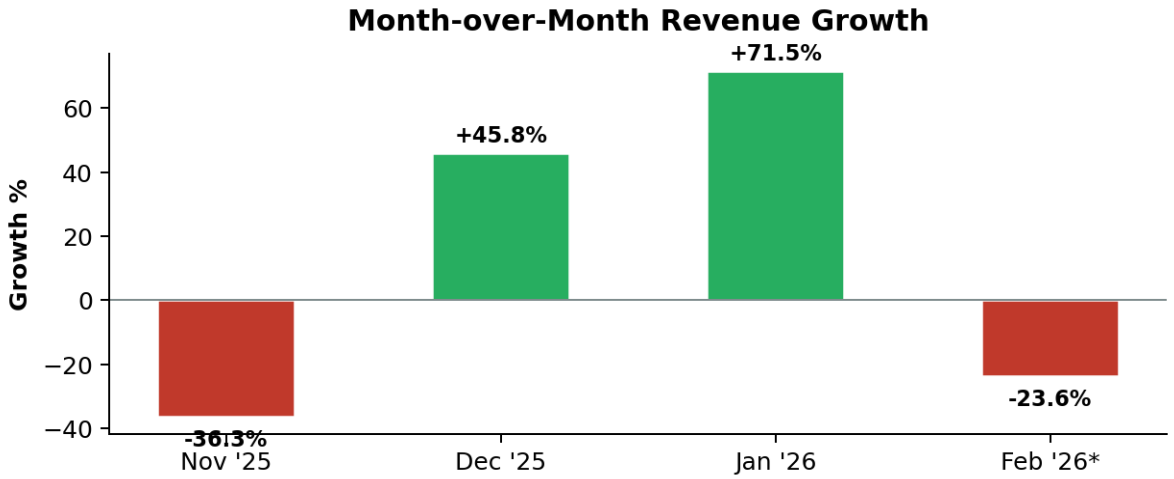




Month	Revenue	Units	Unique Items	Avg. Price
Oct '25	₹70,797	426	56	₹166
Nov '25	₹45,120	286	37	₹157
Dec '25	₹65,803	469	40	₹140
Jan '26	₹1,12,855	795	45	₹141
Feb '26	₹52,373	350	44	₹149

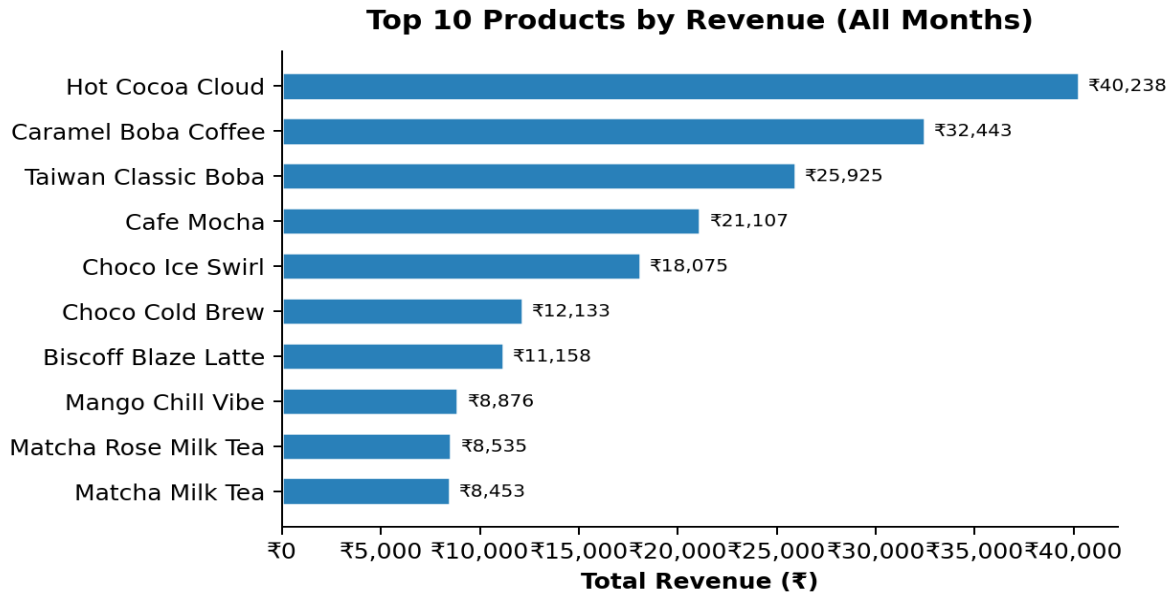
* February 2026 covers only Feb 1-17. Where noted, projections scale to a full 28-day month.

Month-over-Month Growth



November 2025 saw a revenue decline compared to October, coinciding with the end of the festive season and the transition into a quieter period. However, December recovered modestly, and January 2026 delivered a substantial surge — revenue grew to more than 2.5 times November's figure. This was driven by the popularity of winter-specific items in the BnB Signatures category, particularly Hot Cocoa Cloud, which alone generated ₹22,844 in January. The average month-over-month growth rate across the period was 14.3%.

Top-Selling Products



Top 15 Products by Revenue

#	Product	Total Qty	Total Revenue	Months Active
1	Hot Cocoa Cloud	236	₹40,238	3 of 5
2	Caramel Boba Coffee	201	₹32,443	5 of 5
3	Taiwan Classic Boba	141	₹25,925	5 of 5
4	Cafe Mocha	127	₹21,107	5 of 5
5	Choco Ice Swirl	104	₹18,075	5 of 5
6	Choco Cold Brew	74	₹12,133	1 of 5
7	Biscoff Blaze Latte	78	₹11,158	3 of 5
8	Mango Chill Vibe	58	₹8,876	5 of 5
9	Matcha Rose Milk Tea	46	₹8,535	5 of 5
10	Matcha Milk Tea	47	₹8,453	5 of 5
11	Blueberry Blend	51	₹8,432	5 of 5
12	Choco Lush Boba	39	₹6,761	1 of 5
13	Caramel Cafe Delight	54	₹6,701	3 of 5
14	Taiwan Signature Boba	45	₹6,667	5 of 5
15	Hawaii Bubble Soda	58	₹6,081	5 of 5

Hot Cocoa Cloud and Caramel Boba Coffee are the two highest-revenue products overall. Hot Cocoa Cloud generated ₹40,238 across December through February, establishing it as a clear seasonal winner during cooler months. Caramel Boba Coffee and Taiwan Classic Boba are consistent performers present in all five months, making them core menu staples. Choco Ice Swirl and Cafe Mocha round out the top five.

Monthly Best Sellers

Oct '25

#	Product	Qty	Revenue
1	Choco Cold Brew	74	₹12,133
2	Choco Lush Boba	39	₹6,761
3	Matcha Milk Mix	35	₹6,023
4	Taiwan Signature Boba	25	₹4,319

5	Choco Ice Swirl	17	₹2,914

Dec '25

#	Product	Qty	Revenue
1	Hot Cocoa Cloud	78	₹13,302
2	Caramel Boba Coffee	43	₹7,020
3	Biscoff Blaze Latte	31	₹4,427
4	Assam Garden Brew	27	₹2,288
5	Taiwan Classic Boba	27	₹4,841

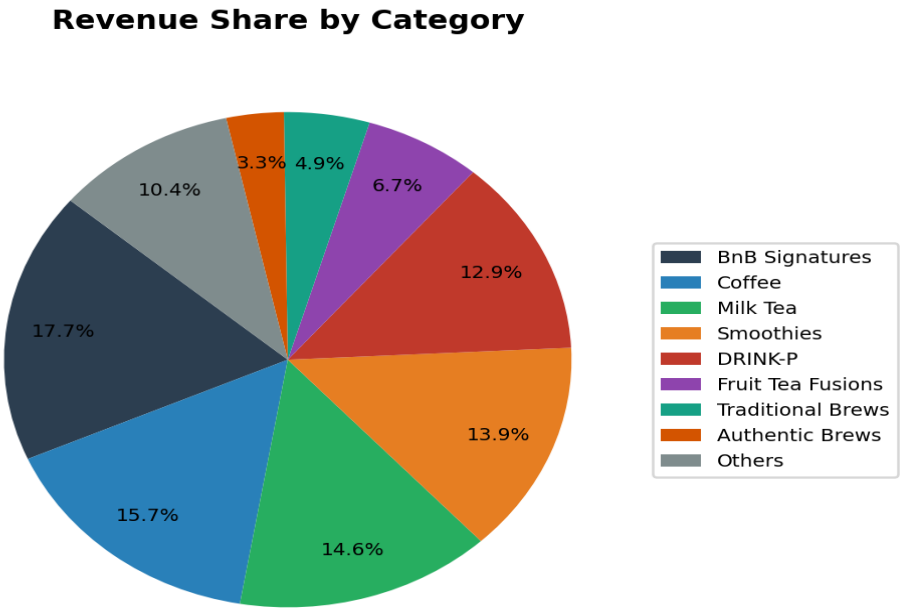
Jan '26

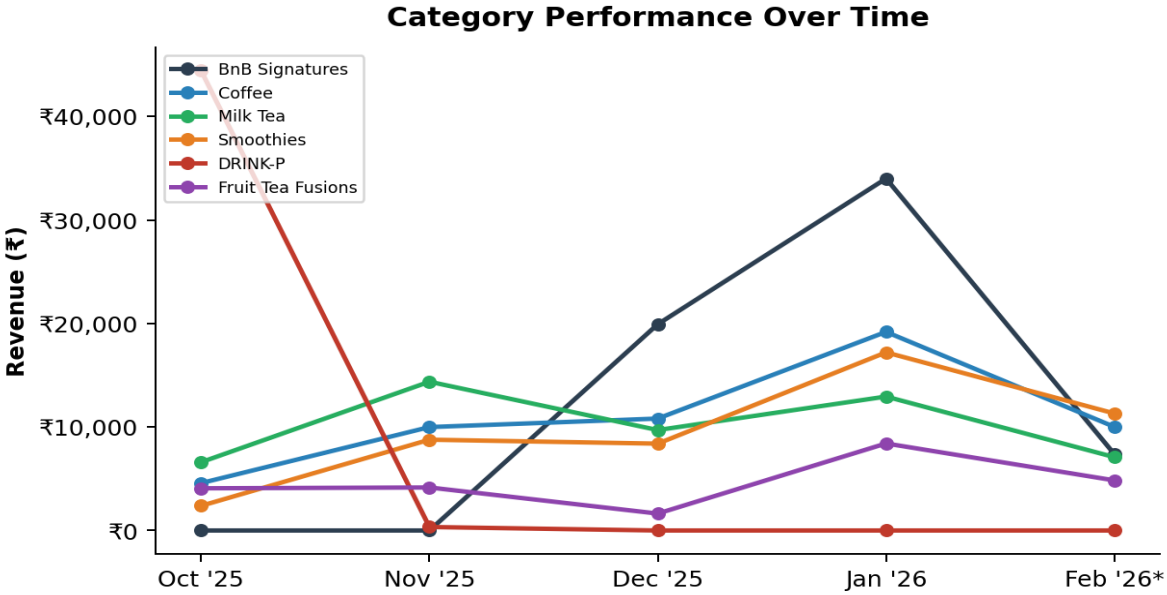
#	Product	Qty	Revenue
1	Hot Cocoa Cloud	134	₹22,844
2	Caramel Boba Coffee	79	₹12,788
3	Classic Boba Brew	61	₹4,036
4	Choco Ice Swirl	44	₹7,731
5	Cafe Mocha	38	₹6,403

Feb '26

#	Product	Qty	Revenue
1	Caramel Boba Coffee	41	₹6,567
2	Taiwan Classic Boba	25	₹4,266
3	Hot Cocoa Cloud	24	₹4,091
4	Choco Ice Swirl	22	₹3,771
5	Cafe Mocha	20	₹3,449

Category Analysis





The top three revenue-generating categories are BnB Signatures (₹61,318), Coffee (₹54,599), and Milk Tea (₹50,711). Together, these account for approximately 48% of total revenue. The BnB Signatures category shows the most dramatic month-to-month variation, peaking sharply in January 2026 due to Hot Cocoa Cloud sales. The DRINK-P category generated ₹44,428 in October alone, making it the largest category that month. It included items such as Choco Cold Brew, Matcha Milk Mix, and various sodas. By November it had dropped to just ₹338, as its products appear to have been recategorised into their respective standard categories (Soda, Smoothies, Authentic Brews, etc.) from November onward rather than being discontinued.

Product Segmentation (K-Means Clustering)

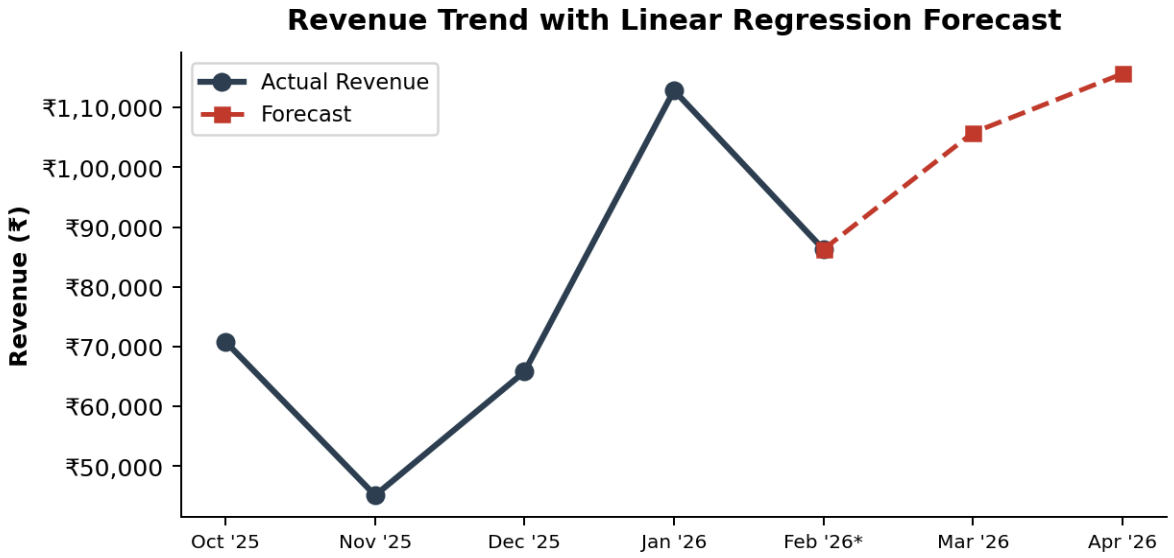
A K-Means clustering algorithm (k=4) was applied to segment the product catalogue based on two features: average monthly quantity sold and average monthly revenue. The algorithm iteratively groups products with similar sales profiles, revealing four distinct tiers of performance.

Segment	Count	Combined Revenue	Example Items
Strong Performers	9	₹1,31,037	Biscoff Blaze Latte, Cafe Mocha, Caramel Boba Coffee
Mid-Range	21	₹93,754	Assam Garden Brew, Black Currant Smoothie, Blueberry Blend
Niche/Low Volume	52	₹69,787	Assam Boba Tea, Black Currant Smoothie-pp, Black Current Cheese
Star Products	2	₹52,371	Choco Cold Brew, Hot Cocoa Cloud

Star Products are the small set of items that drive outsized revenue and volume. These require consistent supply chain attention and should be prominently featured in marketing. Strong Performers represent growth potential — with targeted promotions or combo deals, some of these could be elevated to star status. The Niche/Low Volume segment contains over half the catalogue; pruning underperformers from this group could simplify operations and reduce waste without materially impacting revenue.

Revenue Forecasting (Linear Regression)

A linear regression model was fitted to the five months of historical revenue data to project the revenue trajectory for the near term. February's partial data (17 days) was extrapolated to a full 28-day month before fitting.

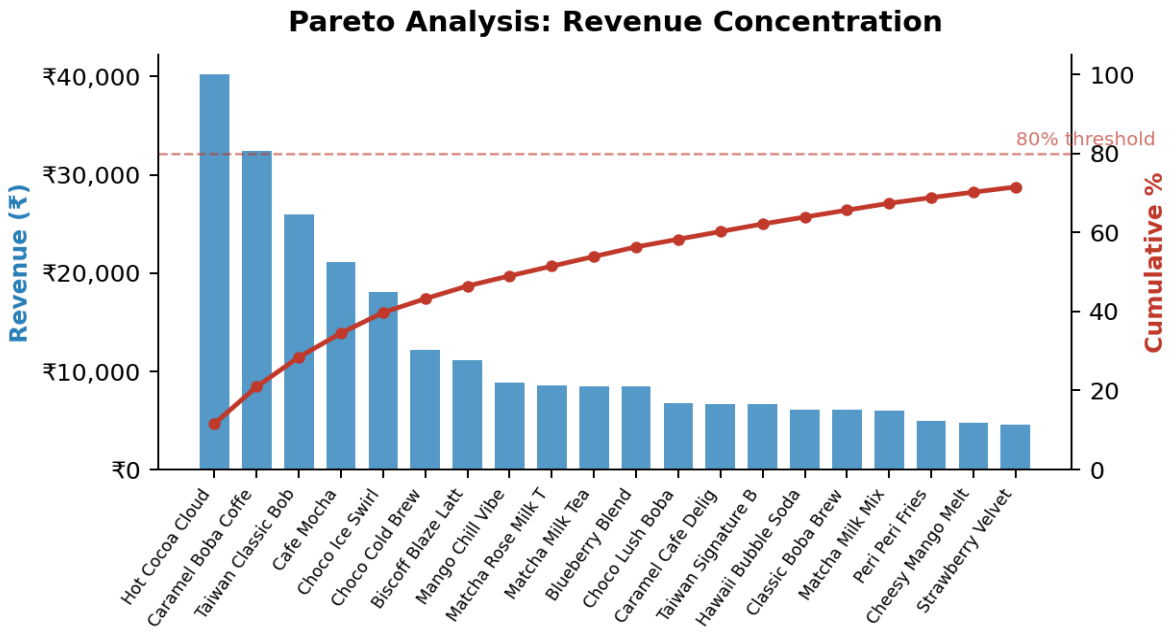


The model estimates a monthly revenue increase of approximately ₹9,866. Based on this trend, projected revenue for March 2026 is ₹1,05,766 and April 2026 is ₹1,15,633. The R-squared value of 0.382 indicates moderate fit — this is expected given only five data points and the influence of seasonal factors. As more months of data accumulate, the model's reliability will improve.

It is worth noting that revenue is not purely linear. Seasonal patterns (winter beverage demand, festive seasons, Valentine's Day) create peaks and troughs that a simple linear model cannot fully capture. A seasonal decomposition or ARIMA model would be more appropriate once 12+ months of historical data become available.

Pareto Analysis (80/20 Rule)

The Pareto principle was applied to identify which products drive the bulk of revenue. Of the 84 unique products in the catalogue, just 28 (33.3%) account for 80% of total revenue. The remaining 56 products collectively contribute only 20%. This is a clear signal that the menu has a long tail of low-impact items.

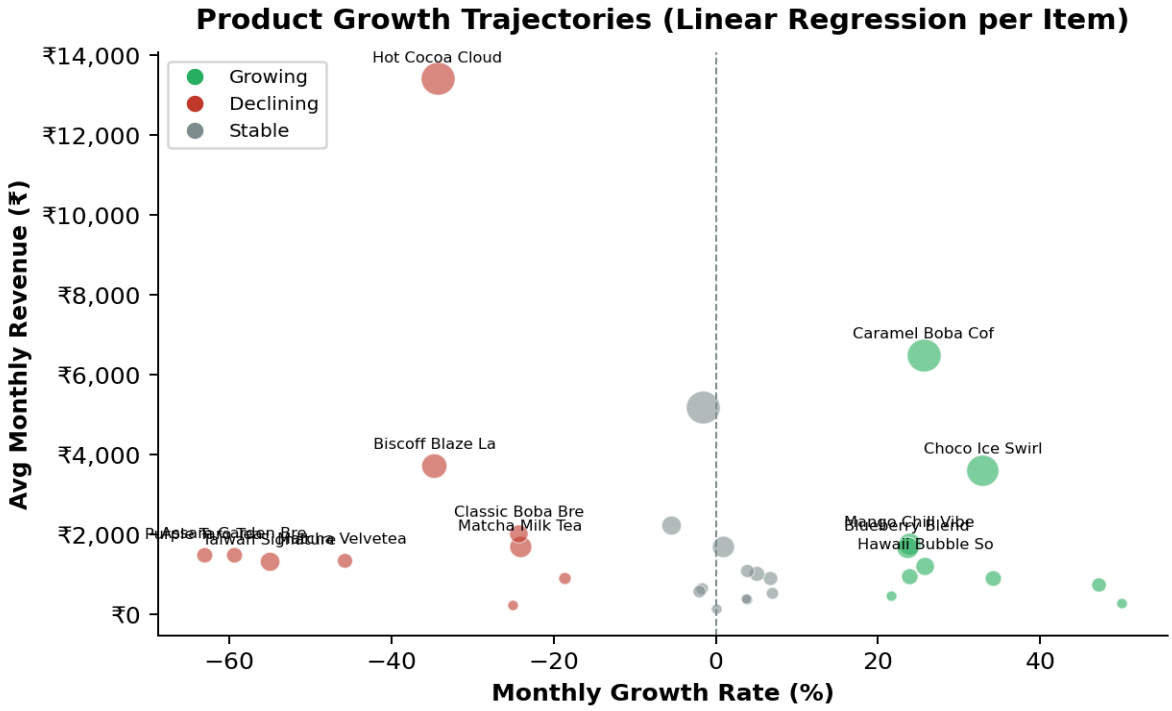


#	Product	Revenue	Cumulative %
1	Hot Cocoa Cloud	₹40,238	11.6%
2	Caramel Boba Coffee	₹32,443	20.9%
3	Taiwan Classic Boba	₹25,925	28.4%
4	Cafe Mocha	₹21,107	34.5%
5	Choco Ice Swirl	₹18,075	39.7%
6	Choco Cold Brew	₹12,133	43.2%
7	Biscoff Blaze Latte	₹11,158	46.4%
8	Mango Chill Vibe	₹8,876	49.0%
9	Matcha Rose Milk Tea	₹8,535	51.4%
10	Matcha Milk Tea	₹8,453	53.9%

The top 10 products alone account for over half of all revenue. Hot Cocoa Cloud leads at 11.6%, followed by Caramel Boba Coffee which together bring the cumulative total to 20.9%. This concentration presents both an opportunity (focus marketing and supply chain on proven winners) and a risk (over-dependence on a small set of products).

Product Growth Trajectories

A linear regression was fitted to each product that has been active for three or more months, measuring its revenue trend over time. Products are classified as Growing (>10% monthly growth), Declining (>10% monthly decline), or Stable. The bubble size reflects total revenue.



Fastest Growing Products

Product	Growth Rate	Avg Rev/Mo	Months
Red Grapefruit Tea Pop	+50.0%/mo	₹276	3/5
Peach Bubble Soda	+47.2%/mo	₹754	5/5
Strawberry Velvet	+34.2%/mo	₹913	5/5
Choco Ice Swirl	+32.9%/mo	₹3,615	5/5
Hawaii Bubble Soda	+25.8%/mo	₹1,216	5/5
Caramel Boba Coffee	+25.6%/mo	₹6,488	5/5
Cheesy Mango Melt	+23.8%/mo	₹951	5/5
Mango Chill Vibe	+23.8%/mo	₹1,775	5/5

Caramel Boba Coffee stands out as the most important growth story: it combines a high growth rate (+25.6%/mo) with the highest average monthly revenue among growing items (₹6,488). Choco Ice Swirl is also on a strong upward trajectory at +32.9%/mo.

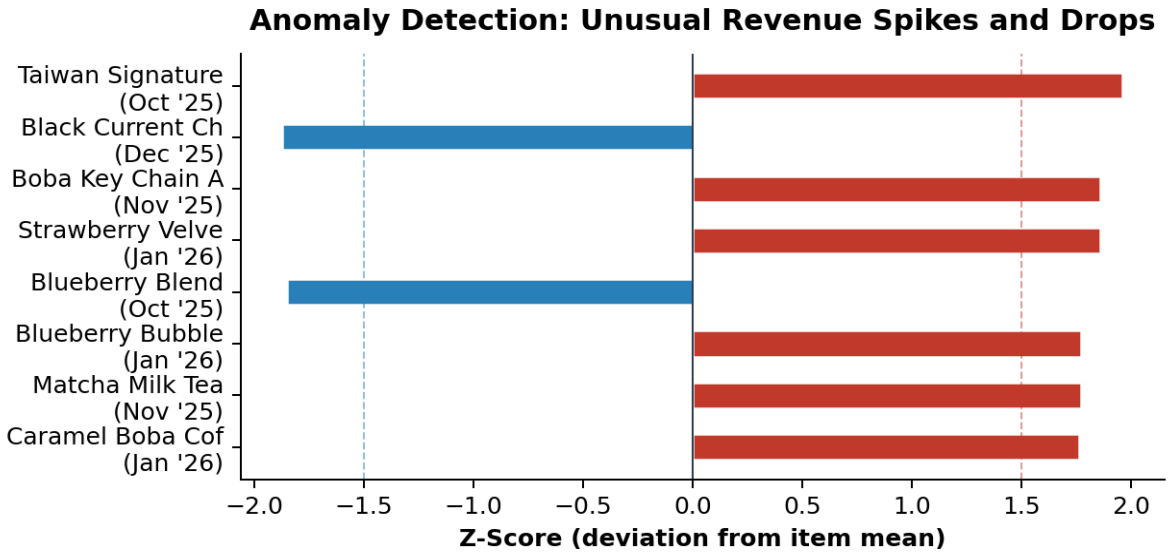
Products Showing Decline

Product	Decline Rate	Avg Rev/Mo	Months
Indus Boba Fusion	-18.7%/mo	₹904	3/5
Matcha Milk Tea	-24.1%/mo	₹1,690	5/5
Classic Boba Brew	-24.3%/mo	₹2,024	3/5
Boba Key Chain A	-25.0%/mo	₹243	5/5
Hot Cocoa Cloud	-34.3%/mo	₹13,412	3/5
Biscoff Blaze Latte	-34.7%/mo	₹3,719	3/5
Matcha Velvetea Boba	-45.8%/mo	₹1,359	3/5
Taiwan Signature Boba	-55.0%/mo	₹1,333	5/5

Several products in the Traditional Brews and Authentic Brews categories show notable declines. Purple Taro Tea, Assam Garden Brew, and Taiwan Signature Boba are all declining at over 50% per month. Note that Hot Cocoa Cloud shows a decline here because it peaked sharply in January and dropped in February — this is likely seasonal rather than a genuine downward trend, and should be re-evaluated next winter.

Anomaly Detection

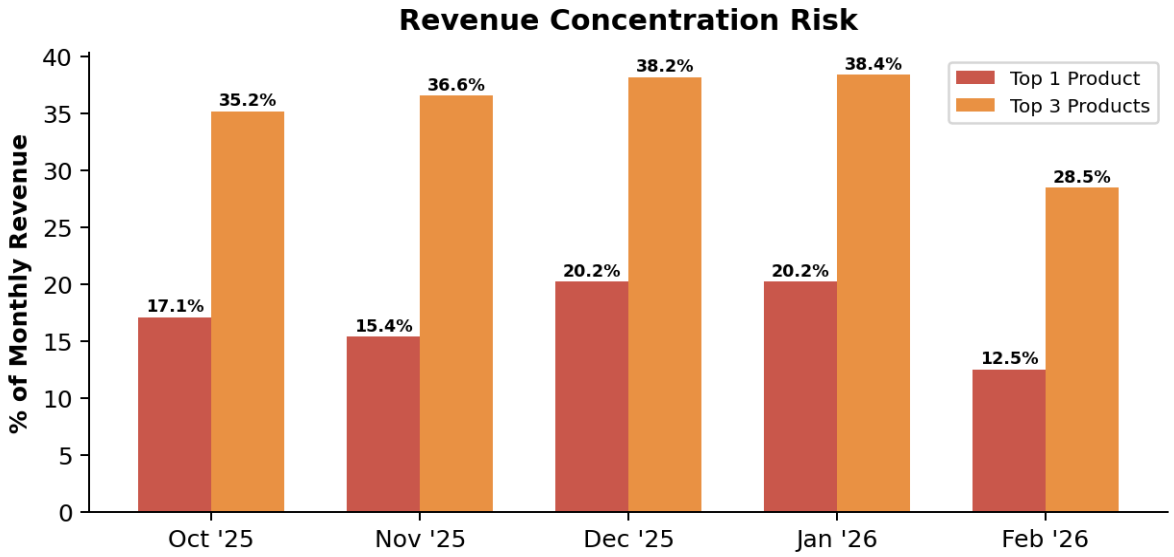
Z-score based anomaly detection was applied to identify months where individual products performed significantly above or below their own historical average. A z-score beyond ±1.5 standard deviations flags a data point as an anomaly worth investigating.



Product	Month	Revenue	Avg	Z-Score	Type
Taiwan Signature Boba	Oct '25	₹4,319	₹1,333	+1.96	Spike
Black Current Cheese	Dec '25	₹152	₹384	-1.87	Drop
Boba Key Chain A	Nov '25	₹533	₹243	+1.86	Spike
Strawberry Velvet	Jan '26	₹2,134	₹913	+1.86	Spike
Blueberry Blend	Oct '25	₹381	₹1,686	-1.85	Drop
Blueberry Bubble Tea	Jan '26	₹1,033	₹526	+1.77	Spike
Matcha Milk Tea	Nov '25	₹3,450	₹1,690	+1.77	Spike
Caramel Boba Coffee	Jan '26	₹12,788	₹6,488	+1.76	Spike

January 2026 dominates the anomaly list, with multiple products recording unusual spikes: Caramel Boba Coffee, Choco Ice Swirl, Sweet Peach Bubble Tea, and Blueberry Bubble Tea all surged well above their averages. This suggests January's strong performance was broad-based rather than driven by a single product. On the downside, Black Current Cheese saw a notable drop in December, and Blueberry Blend underperformed in October.

Revenue Concentration and Dependency Risk

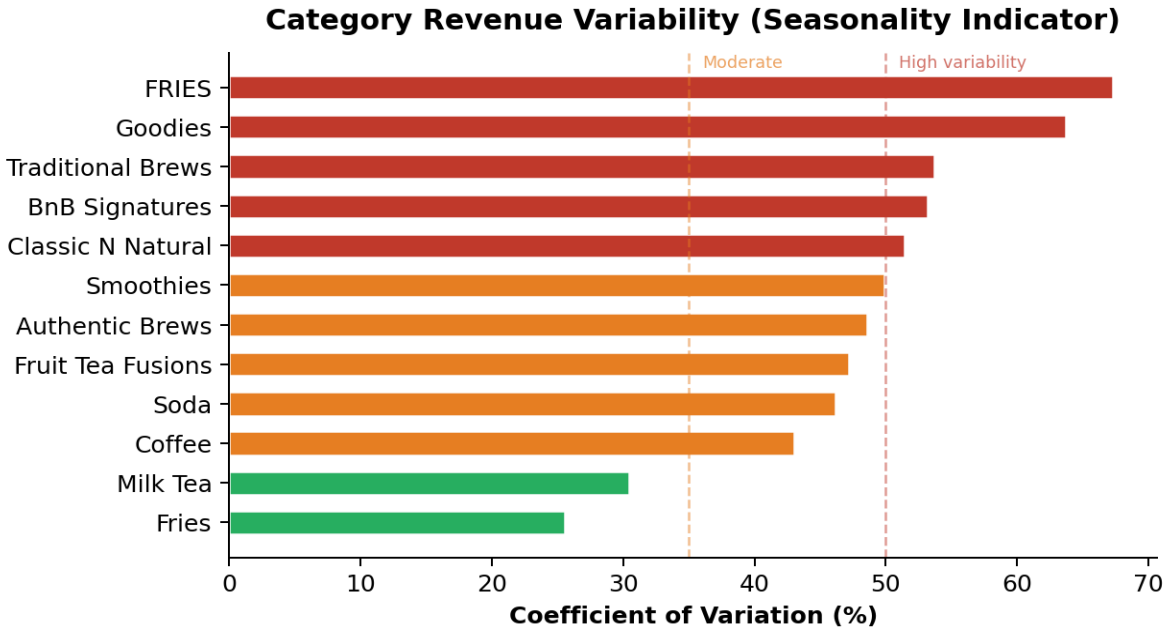


Month	Top Product	Top 1 Share	Top 3 Share
Oct '25	Choco Cold Brew	17.1%	35.2%
Nov '25	Taiwan Classic Boba	15.4%	36.6%
Dec '25	Hot Cocoa Cloud	20.2%	38.2%
Jan '26	Hot Cocoa Cloud	20.2%	38.4%
Feb '26	Caramel Boba Coffee	12.5%	28.5%

The single largest product commands between 12.5% and 20.2% of monthly revenue, while the top three products account for 28.5% to 38.4%. December and January show the highest concentration, with Hot Cocoa Cloud driving roughly a fifth of all sales. February 2026 has the healthiest distribution, with no single product exceeding 12.5%. A more diversified revenue base reduces risk from supply disruptions or changing customer preferences for any one item.

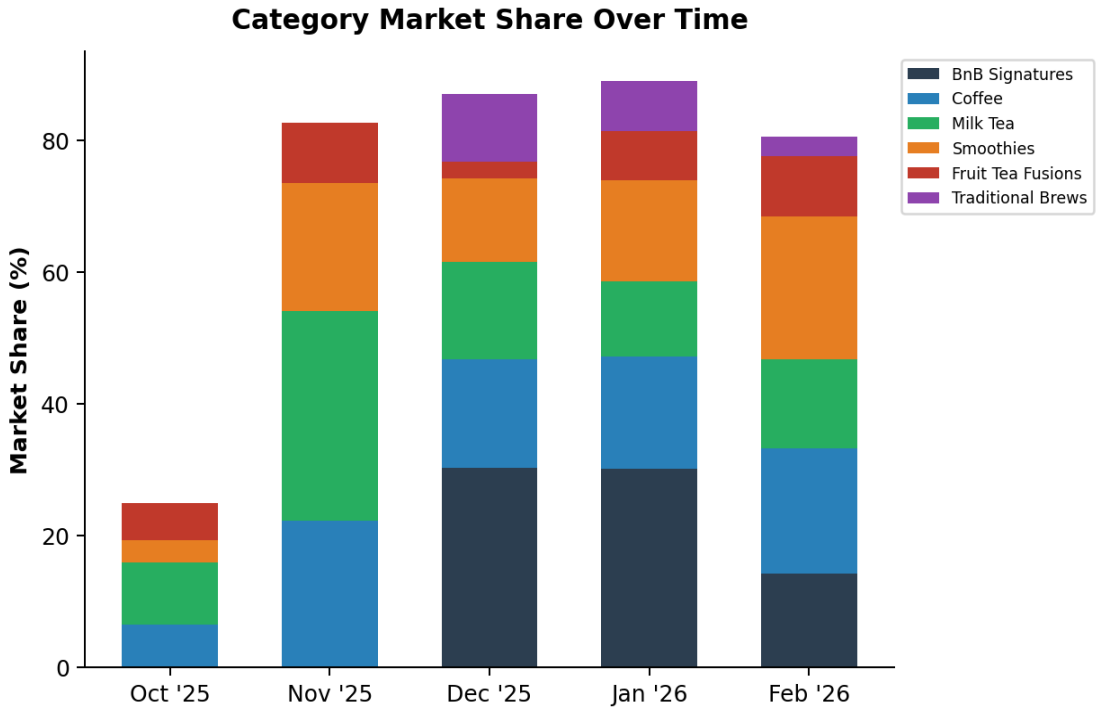
Category Seasonality Analysis

The coefficient of variation (CV) measures how much a category's revenue fluctuates month to month. A high CV indicates strong seasonality or inconsistency, while a low CV suggests stable, predictable demand. Categories with CV above 50% are flagged as highly variable.



Milk Tea (CV 30.5%) and Fries (CV 25.6%) are among the most stable categories, making them reliable baseline revenue sources. However, even Milk Tea saw a spike in November at roughly 32% market share before settling back. BnB Signatures, Traditional Brews, and Goodies show the highest variability among the recurring categories, driven by seasonal demand shifts. The BnB Signatures category in particular swings between zero (in months where it was not yet introduced) and dominant (January 2026), which inflates its CV. As this category matures, its variability should stabilise.

Category Market Share Shift



The composition of revenue has shifted significantly over the five-month period. In October, the DRINK-P category (not shown in chart as it was recategorised) dominated at over 60% of sales. Once products were redistributed, the BnB Signatures category entered strongly in December at around 30% of revenue, driven by Hot Cocoa Cloud and Biscoff Blaze Latte, before settling at 14% in February. Coffee's share nearly tripled from 6.5% to 19.1%, while Smoothies grew from 3.4% to 21.6%. Milk Tea held a significant share throughout, peaking at roughly 32% in November before stabilising in the 11–15% range. These shifts highlight the growing importance of coffee-based and signature beverages in the product mix.

Recommendations

Protect core products

Caramel Boba Coffee, Taiwan Classic Boba, Cafe Mocha, and Choco Ice Swirl are present in all five months and rank among the top revenue generators. Hot Cocoa Cloud is a dominant seasonal seller (December through February). The Pareto analysis confirms that just 28 of 84 products drive 80% of revenue — these core items warrant priority in supply chain and marketing investment.

Double down on growth products

Caramel Boba Coffee (+25.6%/mo), Choco Ice Swirl (+32.9%/mo), Peach Bubble Soda (+47.2%/mo), and Strawberry Velvet (+34.2%/mo) are all on strong upward trajectories. Consider featuring these in promotions, combos, or prominent menu placement to accelerate their growth further.

Address declining products

Purple Taro Tea, Assam Garden Brew, and Taiwan Signature Boba are declining at over 50% per month. Investigate whether this is due to seasonal factors, menu positioning, or customer preference shifts. Either revitalise these items through new variations or promotional pricing, or consider phasing them out.

Expand seasonal and limited-edition offerings

The Valentine’s Day specials (Hongkong Rose Milk Tea, Lychee Rose Smoothie) generated ₹4,667 in just 17 days. Similarly, Halloween items in November contributed ₹2,176. These results validate the strategy of introducing time-limited menu items around holidays and events.

Rationalise the menu

With 84 unique products and over half falling into the Niche/Low Volume cluster, there is room to streamline. The Pareto analysis shows 56 products contribute just 20% of revenue. Removing or consolidating the lowest-performing items would reduce ingredient complexity, minimise waste, and sharpen the menu’s identity.

Reduce revenue concentration risk

In December and January, the top product alone accounted for over 20% of revenue. While this reflects strong demand for Hot Cocoa Cloud, it also creates dependency. Diversifying the winter menu with additional signature hot beverages would reduce the risk of revenue loss if any single item underperforms.

Monitor pricing consistency

Items like Jasmine Mango Bubble Tea (33.1% price variation) and Raw Mango Mist Pop (23.4%) show significant unit price fluctuations across months. Standardising pricing or understanding what drives these variations (discounts, combos, portion changes) would help maintain margin predictability.

Methodology

This report was generated by parsing five monthly Item Wise Sales Report files (Excel format) covering October 2025 through February 2026. All item-level rows were extracted, normalised, and aggregated using Python (pandas, numpy). The following analytical techniques were applied:

K-Means Clustering (k=4): Euclidean distance, 50 iterations, applied to normalised average monthly quantity and revenue per product. Used for product segmentation into four performance tiers.

Linear Regression (OLS): Applied at two levels: (1) overall monthly revenue for trend estimation and short-term forecasting, and (2) per-product revenue for growth trajectory classification.

Pareto Analysis: Cumulative revenue distribution to identify the minimum product set driving 80% of total revenue.

Z-Score Anomaly Detection: Per-product z-scores computed against each item's own historical mean and standard deviation. Observations beyond ±1.5 standard deviations flagged as anomalies.

Coefficient of Variation: Computed per category to quantify revenue variability as a proxy for seasonality. Higher CV indicates more inconsistent or seasonal demand patterns.

Revenue Concentration Analysis: Monthly Herfindahl-style concentration metrics measuring top-1 and top-3 product share of total revenue, used to assess dependency risk.

Charts were produced with matplotlib. February 2026 data covers the 1st through the 17th only; where noted, values are scaled proportionally to a full calendar month.
